## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rizk et al. (U.S. Patent No. 4,652,012) in view of Feng et al. (European Patent Application 0 676 403 A1).

For claims 1-3, in column 3, lines 11-24, Rizk teaches the reaction of a secondary amine with a polyisocyanate, where the polyisocyanate is preferred to be an aliphatic polyisocyanate and where there are three equivalents of isocyanate to one equivalent of aminosilane. For claims 4-6, in column 4, lines 25-41, Rizk teaches that a polyol is added to the composition. Rizk fails to teach or suggest the use of secondary aminosilanes where there is a phenyl group bound directly to the nitrogen of the amino group.

Feng, on page 4, lines 20-57, teaches the use of secondary aminosilanes containing a phenyl group bound directly to the amine nitrogen. Here, Feng specifically references the polyisocyanates set forth by Rizk. Note also page 3, lines 5-10.

Feng and Rizk are analogous art in that they both use adducts of polyisocyanates and secondary amines in polymer compositions. It would have been obvious to one of ordinary skill in the art at the time of the invention to use the phenyl-

containing secondary amines of Feng in the compositions of Rizk. The motivation would have been that Feng states that the use of the phenyl-substituted aminosilanes results in compositions that exhibit improved elongation, flexibility and lower modulus of elasticity. One of ordinary skill in the art would have made the substitution to improve these properties in the compositions of Rizk.

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Wagner et al. (U.S. Patent No. 3,895,043), Meiller (U.S. Patent No. 4,049,691), Chiao (U.S. Patent No. 5,623,044), and Wang (U.S. Patent No. 6,350,799) are cited for general interest.
